Question #9

Topic 4

You create a dashboard in Power BI. You share the dashboard with the sales team.

Sales team members report that they can see information for the entire company.

You need to ensure that the team is able to see only data for their team.

Where must you configure this restriction?

A. Dashboard

B. Report

C. Dataset

D. Settings

Correct Answer: C

Restrict access to the dataset.

Note: Another way of setting access is through manage permission in the dashboard, report, or dataset. If you share a dashboard, by default the report and the dataset will also be shared as read-only for users.

You create a canvas app that connects to a Common Data Service database.

Users report that they do not see any data in the app.

You need to ensure that users can view data in the app.

What should you do?

- A. Share the app with the users
- B. Add a Power Apps license to the users
- C. Assign a security role to the users
- D. Publish the app

Correct Answer: C

Sharing access to the data in the Common Data Service. The users need permission to access the entities the app uses. To grant them access, you will need to:

1. Create a security role
2. Assign users to the security role

Note: Common Data Service for Apps has a powerful enterprise grade security model that allows you to group users in security roles and give those roles varying levels of access to entities that some of our most sophisticated business apps are built on.

C (100%)

You are creating an app for a company.

You need to evaluate the default solution.

Which two behaviors should you expect from the default solution? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. You can change the prefix of the publisher of the default solution
- B. If you create a Power Automate flow in a solution, the flow uses the prefix defined in the publisher
- C. If you create an environment variable in a solution, the variable uses the prefix defined in the publisher
- D. You can change the version number of the default solution

Correct Answer: BD

The default solution in Power Apps is the Common Data Service Default Solution, which is associated with the Microsoft Dataverse Default Publisher. The default publisher prefix will be randomly assigned for this publisher, for example it might be cr8a3. This means that the name of every new item of metadata created in the default solution will have this prepended to the names used to uniquely identify the items. If you create a new entity named Animal, the unique name used by Dataverse will be cr8a3_animal. The same is true for any new fields (attributes), relationships, or option-set options. If you'll be customizing this special solution, consider changing the publisher prefix.

Incorrect Answers:

A: You can only change the prefix of unmanaged solutions.

DRAG DROP -

A company has the following divisions: wholesale and retail.

The manufacturer wants to create a single Power BI report to allow users to view data from a Microsoft SQL Server database.

You need to ensure that each user sees data only for the team to which the user is assigned.

How should you secure the report?

To answer, drag the appropriate options to the correct action. Each option may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Options

Power BI Service

Power BI Desktop

Common Data Service

Power Platform Admin center

Answer Area**Action**

Create the team as a role.

Add members to the role.

Option

Correct Answer:**Options**

Power BI Service

Power BI Desktop

Common Data Service

Power Platform Admin center

Answer Area**Action**

Create the team as a role.

Add members to the role.

Option

Power BI Desktop

Power BI Service

Box 1: Power BI Desktop -

You can define roles and rules within Power BI Desktop. When you publish to Power BI, it also publishes the role definitions.

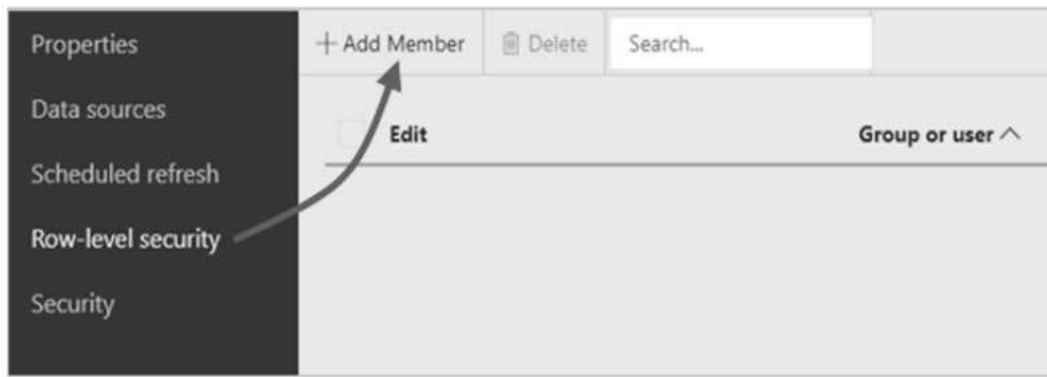

To define security roles, follow these steps.

1. Import data into your Power BI Desktop report, or configure a DirectQuery connection.
2. From the Modeling tab, select Manage Roles.
3. From the Manage roles window, select Create.
4. Etc.

Box 2: Power BI Service -

After you save your report in Power BI Report Server, you manage security and add or remove members on the server.

1. In Power BI Desktop, save the report to Power BI Report Server. You need to use the version of Power BI Desktop for Power BI Report Server.
2. In Power BI Report Service, select the ellipsis (⋮) next to the report.
3. Select Manage > Row-level security.

On the Row-level security page, you add members to a role you created in Power BI Desktop.
